## About us

Essie Suffolks based in the North East of Scotland produces High EBV Index Suffolk shearling rams and gimmers for commercial and pedigree flocks. Flock registration H6. We produce naturally fleshy, long, wide shearlings with good skins with an emphasis on growth rate, confirmation and size for both terminal and maternal use. Established over 40 years ago our closed flock consists now of over 120 ewes. By carefully selecting growth, confirmation and maternal traits in our breeding programme, most of our ewes and all our stock rams are in the top 1%.

## Ethos

"Our Shearlings are naturally produced on a grass based system. After the 16 week weighing and scanning, the lambs are turned out to grass for the rest of the year. They are out-wintered all winter and the shearlings begin a supplement of oats in July. We believe that by maturing naturally our shearlings achieve their mature weight, size and strength naturally and go on to perform consistently for years.

We have done Performance Recording for 25 years. After the standard performance recording at 8 and 16 week weighing, we transport 15 of our ram lambs to Edinburgh for CT scanning. This allows us to measure meat to bone ratio in the lambs more carefully, helps us to calculate a more accurate index measurement, and assists in maximising the accuracy of our genetic breeding values.

Attention to health is paramount within the flock. The flock is MV Accredited, Scrapie Monitored, CLA tested and clear for 15 years now. All stock rams have been genotyped ARR/ARR for many years. At least another 10 top tup lambs are tested every year and also result in ARR/ARR results.

## Breeders are welcome to come to the farm and buy their personally selected rams.

At Sales (Kelso and Dingwall) Essie Shearlings are presented naturally. They are not trimmed or dressed and have not been fed cabbages.

## Innovation

Irene Fowlie won "UK Sheep Innovator of the Year" 2015.  
RamCompare - Essie Suffolks have been selected to participate in this UK commercial sheep project. Every year their rams are among the top rams for growth rate, muscle depth (conformation) and days to slaughter.

## Export

Essie Suffolk sheep have been exported to Georgia and Russia, (both thought to be a first), Germany, Holland, Portugal, Romania, Moldova and Eire. Essie Suffolk semen has been exported to Canada, Norway, Sweden, Czech Republic, USA and Hungary.

## Essie Performance

Essie Shearlings have done particularly well in RamCompare – the UK's commercial progeny test for terminal sire rams. RamCompare, over 7 years, has collected data from 401 rams from 17 different breeds and over 38,000 lambs. Essie rams are among the top rams for growth rate, muscle depth (conformation) and days to slaughter. This UK wide research has proven that an Essie Shearling, tested on an equal footing with 17 breeds, will give you early lambs with excellent conformation to suit the market. Signet also advises that the use of EBVs are even more important for selecting maternal sires. Essie Shearlings are mostly in the top 1% for Maternal Index for Performance Recorded Suffolks. Our buyers tell us that Essie Cross females are excellent milky, prolific, easy lambing mothers. Every year we continue to improve Essie Suffolk Shearlings to produce very fast growing and finishing lambs with excellent conformation and top quality easy lambing, milky Suffolk cross females.

**We're pleased that our shearlings are as strong as ever and the performance records again show further improvement in performance index figures - even in the new Signet National Terminal Sire Breeding Evaluation. By carefully selecting growth and conformation traits in our breeding programme, most of this year's Essie Rams are still in the top 1% UK Terminal Index AND the top 1% of the UK Maternal Index. Some of our shearlings have NZ genetics bred by our home-bred 3/4 NZ ram – a huge, tall, long and impressive ram.**
